Mobile Printing

RICOH

Flexible, sustainable printing

The ability to print from mobile devices is quickly becoming a necessity to keep up with the pace of today's business world. However, a free-for-all mobile printing environment can be detrimental to your sustainability initiatives. Ricoh Mobile Printing solutions can help you enable print mobility for both employees and guests without tossing your environmental strategy to the wind. Intelligent and intuitive features help provide flexibility while combatting potential energy, paper and toner waste. Harness the potential of your employees' personal devices to reduce the energy output of desktop PCs. Utilize resource-saving tools such as print release features to reduce the overuse of consumables. When you can enable workstyle innovation while demonstrating responsible environmental stewardship, everybody wins — and Ricoh can help you get there.

Reduce energy strain on PCs

Have you ever had to turn on a desktop PC just to submit a document for printing? The energy required to boot up and utilize a desktop hardly seems worth it for just a few printed pages. Ricoh Mobile Printing solutions can help you support "**Bring Your Own Device**" (BYOD) initiatives — allowing your workers to use their personal devices to submit documents for printing — with your green goals front and center. Employees and guests can use their own mobile devices to complete necessary tasks, so you can reduce the energy expenditure from "middleman" desktop PCs.

Cloud printing for less energy

For those that need to print on the go, many Ricoh Mobile Printing solutions utilize the Cloud to enable print submission from mobile devices. Not only does Cloud printing help you keep processes moving, but it can also reduce the resource strain on your server and office devices. Whether you're in another building or looking for a hot spot while traveling, use the Cloud to **Submit Documents to Print from Anywhere** to ease the burden on your organization.

Prevent user-created waste

Have you ever forgotten a print job and left it sitting in the output tray — only to be accidentally taken or thrown away by someone else? What about picking up a document and realizing you used the wrong settings? **Print Release Features** help reduce forgotten prints and user print errors — mistakes that cause energy, paper and toner waste. Ricoh Mobile Printing solutions extend these resource-saving features to your mobile devices, so you can submit print jobs with confidence.

Documents are held until you are ready

In this New World of Work, information needs to be flexible. Shouldn't your printing processes be the same? With flexible Mobile Printing solutions that utilize print release features, you can reduce output waste with the ability to **Delete Unwanted Prints** from your print queue — all from the control panel of the MFP. Instead of having to print a new copy every time a change is made, you can make changes to your documents even after they have been submitted. Easily delete old iterations of files and release the most up-to-date version at the MFP when you're ready. You can also instruct the print queue to automatically delete unprinted files after a certain amount of time.

Made Possible by Ricoh Technology

Our portfolio of software from Ricoh and industry-leading partners enables effective Mobile Printing that can benefit your business while helping the environment.

Driving Sustainability for Our Future

Ricoh is committed to supporting the environment through practical energy efficiency, fleet and print optimization, equipment take back and toner recycling programs. Take advantage of our unique sustainability offerings, uncover savings and distinguish your business as a leader…all while driving sustainability for our future.
